MEMS Capacitive Accelerometer

Uniaxial MEMS Capacitive Measurement Range: ±2 to ±200 g Noise Density: 10 to 680 µg/√Hz Frequency Range (±5 %): DC to 1500 Hz Aluminum Housing Made in Germany

MEMS Capacitive Accelerometer

The key components in capacitive accelerometers are high-quality micro-electromechanical systems (MEMS) that feature excellent long-term stability and reliability. This technology enables the measurement of static (DC) and constant accelerations, which can be used to calculate the velocity and displacement of moving objects. Depending on the design of the spring-mass-damping system, however, it is also possible to detect dynamic (AC) accelerations with amplitudes up to ± 200 g and within a frequency response range of up to 1.5 kHz (± 5 %) or 7 kHz (± 3 dB). Other advantages of capacitive accelerometers are their outstanding temperature stability, excellent response behavior and achievable resolution.

Description

The accelerometers of type ASC 3521MF are based on proven MEMS technology and capacitive operating principle. The integrated electronic circuitry enables a differential analog voltage output (\pm 2.7 V FSO) and flexible power supply voltage from 5 to 40 VDC. The MF (Medium Frequency) accelerometers from ASC provide a wide frequency response range from 0 Hz to 7 kHz (\pm 3 dB) and an extremely robust design with shock resistance up to 6,000 g.

The sensors feature a lightweight, reliable aluminum housing with protection class IP65 and an integrated cable with configurable length and connectors.

The compact design of uniaxial ASC 3521MF enables numerous possible applications, such as shock and vibration tests regarding operational stability of HV batteries.

Features

- Low Noise Differential Voltage Output
- DC Response, Gas damped
- Very High Shock Resistance
- Excellent Offset and Scale Factor Stability

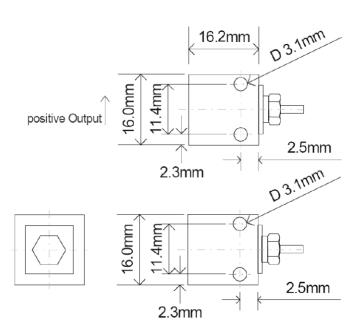

Options

- Customized Cable Length
- Customized Connector
- TEDS Module

Applications

- Operational Stability Tests
- Test Bench Applications
- E-Mobility, HV Batteries

More applications in several markets are figured out on our web page www.asc-sensors.de

MEMS Capacitive Accelerometer

Typical Specification

Dynamic

Measurement Range	g	±2	±5	±10	±30	±50	±100	±200

Remarks:

- The conversion factor 1 g corresponds to 9.80665 m/s².
- If any other calibration procedure is required, don't hesitate to contact us. Our services include both factory calibration and calibration in accordance with DAkkS guidelines.
- Furthermore, sensors have to be calibrated regularly to ensure accurate and precise results. On request we will be glad to remind you of the next scheduled calibration of your sensors.

Cable Code / Pin Configuration (4 Wire System)

	Pin	Color Code	Description				
1	Supply +	Red	Power supply voltage +5 to +40 VDC				
2	Supply -	Black	Power GND				
3	Signal +	Green	Positive, analog output voltage signal for differential mode				
4	Signal -	White	Negative, analog output voltage signal for differential mode				
	Cable shielding is provided as a tinned-copper braiding which is also internally connected to the sensor housing

Ordering Information

Series	Model	- Range [g]	- Cable Length [m]	Connector & Pinout
ASC 35	21MF	002	6	А
		005		
		010		
		030		
		050		
		100		
		200		
Example:				
ASC	3521MF-002-6	Α		

Ordering information are based on standard configurations. All customized versions regarding connector and/or pinout will lead to a corresponding product match code:

- Standard length of the integrated cable is 6 meters. However, different customized cable lengths are possible on request.
- Standard version has no connector at the cable end which is identified by "A" in the product match code. However, it is possible to assemble almost all connector types during production.

MEMS Capacitive Accelerometer

Safety Precaution for Installing and Operating

This data sheet is a part of the product. Read the data sheet carefully before using the product and keep it available for future operation. Handling, electrical connections, mounting or any other work performed at the sensor must be carried out by authorized experts only. Appropriate safety precautions must be taken to exclude any risk of personal injury and damage to operating equipment as a result of a sensor malfunction.

Handling

The sensor is packaged in a reliable housing to protect the sensing elements and integrated electronic components from the ambient environment. However, poor handling of the product can lead to damages that may not be visible and cause electrical failure or reliability issues. Handle the component with caution:

- Avoid shocks and impacts on the housing, such as dropping the sensor on hard surface
- Never move the sensor by pulling the cable
- Make sure that the sensor is used within the specified environmental conditions
- Transport and store the sensor in its original or similar packaging
- The sensor should be mounted on a stable flat surface with all screws tightened or other mounting options
- When adhesives are used to mount the sensors, please select the corresponding products according to permanent or removable mounting, ambient temperature range as well as quality of the mounting surface
- Avoid any deformation during mounting the sensor
- Mounting tolerances may have an influence on the measured result

Electrical

ASC's inertial sensors are working with many established data acquisition systems. However, make sure that a proper DAQ is used, for the corresponding operation principle of the sensor. Furthermore, suitable precautions shall be employed during all phases of shipment, handling and operating:

- Active sensor pins are susceptible to damage due to electrostatic discharge (ESD)
- Make sure that the sensor is used within the specified electrical conditions
- Check all electrical connections prior to initial setup of the sensor
- An incorrect wiring of the signal or power supply connections will lead to damages of the sensor
- Completely shield the sensor and connecting cable according to your application
- Do not perform any electrical modifications at the sensor
- Do not perform any adaptions on the wiring or connectors while the device under power
- Never plug or unplug the electrical connection while the sensor is under power
- When a certain pin is not used during operation, make sure that the pin is insulated

Quality

- We have a quality management system according to **ISO 9001:2015**.
- The Deutsche Akkreditierungsstelle GmbH (DAkkS) has awarded to our calibration laboratory the DIN EN ISO/IEC 17025:2018
 accreditation for calibrations and has confirmed our competence to perform calibrations in the field of mechanical acceleration
 measurements. The registration number of the certificate is D-K-18110-01-00.
- The sensors described in the data sheet are CE-compliant.
